

The Professional's choice at home

The Rocket Giotto PID V3 is a visually stunning machine with a build quality that has never been compromised. For over 15 years the reputation of a reliable machine with superior results has the Giotto supported, promoted and loved by the coffee industry as the Barista's home choice.

Research and development, together with international customer feedback has led Rocket Espresso to further develop the Giotto PID V3 model in the tradition of quality that is Giotto!

Combining the very best in traditional craftsmanship and technical knowledge the V3 is built to reflect the commercial machine experience.

Starting at the very end of the process, by creating the perfect espresso, the engineers work in reverse to create the ultimate espresso machine.

The boiler with heavy end plates and capacity of 1.8 litres has been matched to the Thermosyphon system allowing the balance of the espresso machine which enables the ability to texture perfect milk and optimizing perfect extraction temperature for the tastes and flavours of espresso, without delay.

Regarded by coffee lovers worldwide as a classic benchmark.

- Easily accessible and adjustable boiler temperature control.
- Professional heavy (4.050 kg) duty brewing group with coffee pre-infusion system of oversized static expansion chamber. This system allows for thermic stability and the smoothest extraction for optimum aroma, body and “crema”.
- No-burn stainless steel steam and hot water wands (only the end nozzle gets hot).
- Thermosyphon Circulation System: built with professional size components results in increased efficiency.
- The boiler has automatic water refill and is electronically controlled.
- Coffee, steam and hot water can be prepared simultaneously as on a professional machine.

Brewing Groups	1
Brew Head Style	E61 4.05kg Brass
Boiler	1.8 litre Copper with Brass end plates and insulated thermal boiler wrap
Coffee Control	Lever
Water Tank	Tank only 2.9L
Thermosyphon System	Heat exchange
Coffee Preinfusion	Oversized static expansion chamber
Boiler Temperature Control	PID temperature control and solid state relay combination
S/Steel Wands	Non burn 360
Steam Valves Control	1/4 turn
Clearance (mm) Spout to Tray	75mm
Dimensions On Bench	Weight: 23kg. Height: 41cm. Width: 33cm. Depth: 42cm
Dimensions Boxed Carton	Weight: 26kg. Height: 54cm. Width: 39cm. Depth: 50cm
Heating Element Wattage	1200 W
Voltage/Power	230/50 V/10 Amp
Boiler Contamination Protection	Anti-vaccum valve
Element Protection	Manual reset thermo switch & element time out protection
Body	All stainless steel AISI304
Additional Extras	Professional 58mm alloy Rocket branded tampa. Full size commercial one and two cup filter handles and baskets. Full training guide and instructions DVD & Booklet. Technical phone support on 1300 326 326
