

*“The perfect balance of technology,
quality and practicality”*

- The R9 is a stainless steel multi boiler system with fully saturated group head.
- Each Group can be incrementally adjusted in temperature by +/- 1 degree.
- Featuring LED digital shot timers and group head temperature displays.
- A clever ergonomic design with the extended work platform, steam levers and a low profile.
- Stainless steel boilers.
- Brew Boiler Capacity: 1.9 litres
Heating element 1200W.
- Independent steam boiler to maintain high quality for milk texturing:
 - Steam/service boiler capacity
 - 2 Group: 9 Litre
 - 3 Group: 12.7 Litre

These days, our Barista's are world class. Their skills and high levels of understanding for espresso require the elements essential to continually search for finer results. Rocket Espresso acknowledge these attributes and have designed the Rocket Espresso R9, a sleek creation to meet the movement of the industry.

The Rocket Espresso fully saturated group head technology provides the anticipated levels of temperature stability allowing the user to control the factors necessary for development of flavour and quality in the

cup. Featuring a stainless steel multi boiler system, each group head is PID controlled and can be incrementally adjusted in temperature by +/- 1 degree.

The low profile and ergonomic design of the R9 has the barista in the forefront. The drip tray acts as an extended work platform with the smooth steam levers providing the perfect amount of tension when activated. Also helping the barista maintain consistency throughout the day are the digital LED displays found on each group with digital shot timers and the reading of each group head temperature.
